

# Wireguard VPN Project

Project Scope: Create a VPN server that I can use with a subdomain of my [ridgewright.com](https://ridgewright.com) domain that way dynamic dns can still be utilized to automatically update the public IP address and the VPN server configuration will not break.

This one took a lot of mulling over, I wanted something easy that I could setup on my Windows server 2025 homelab as it had been sitting for awhile after I had taught myself some Active Directory basics.
