Wireguard VPN Project

Project Scope: Create a VPN server that I can use with a subdomain of my ridgewright.com domain that way dynamic dns can still be utilized to automatically update the public IP address and the VPN server configuration will not break.

This one took a lot of mulling over, I wanted something easy that I could setup on my Windows server 2025 homelab as it had been sitting for awhile after I had taught myself some Active Directory basics.
